DETAILED ACTION

Applicant's election without traverse of group I in Paper No. 4 is acknowledged.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 4 and 9 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by 5450221 ("221").

Per claims 1 and 9, 221 teaches a first housing [80]; a second housing [60]; a third housing [12]; a liquid crystal panel fixed between the first housing and the second housing [66]; a light source fixed to said third housing [38 which sit in holes 36 after twisting to secure lamp to the inside surface], wherein said second housing and said third housing are detachable [62 fit into holes 30 and are detachable as they are not permanently attached], and wherein the first housing, second housing and the third housing overlap [see figure 7]; a timing-converter board fixed to an opposite side surface of said third housing so a side surface [see 46 and 40 attached to the outside surface of 12], wherein said light source is fixed to said a side surface [the lamp is twisted in order to seat it against the inside surface of 12]; and protrusions formed on said opposite side surface to determine a maximum thickness of the liquid crystal display device [see protrusions 26].

Per claim 2, the protrusions are formed inside the peripheral edges of the cell. See figures 3 and 5.

Per claim 4, see translucent web 64.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

Art Unit: 2871

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

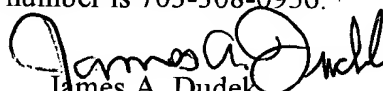

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over 221.

221 discloses the claimed invention except for the light source control circuit arranged on the opposite side surface. However, it was well known to use the same control circuitry to control the lamp in order to save space. Thus, placing the control circuitry on the outside surface of 12. Accordingly, it would have been obvious to one of ordinary skill at the time the invention was made to combine the well known control circuitry.
